## Save Next Iteration:

This script will save another copy of the active doc in a folder that is in the same directory as the active photoshop doc. It will also save the current active photoshop doc.

Please let Jeffrey know if there are any issues, such as not saving another iteration etc.

Place the script at "/Applications/Adobe Photoshop CC 2018/Presets/Scripts/". Placing it here will allow you to create a keyboard shortcut to the script.

To create a keyboard shortcut, go to Edit >> Keyboard Shortcuts... Within the keyboard shortcuts panel, go to File drop down in the scroll panel and scroll down and find the script name "Save Next Iteration" and set your custom keyboard shortcut. I use "Command + Ctrl + S", but you can use whatever you like.
